About AD-Sign

Ad-Sign is a desktop tool designed to attach digital signatures to files in any format. The digital signature can be as per the standard specified by NPCI. The output signed file will contain the data and Digital Signature along with the Public Key Certificate of the Signer. The tool also performs verification of a digitally signed file received from NPCI. After verification, the tool allows extraction of the original data and saves it in the required location.

Features of AD-Sign

Comprehensive :   Involves all modules, including outward processing as well as inward processing and MIS and Reports.

Proven :   Implemented and sold as Capex for leading banks

Ad-Sign Digitally Signs files required as per NPCI guidelines
